Subject: End of Active Life – Inuktun Nanomag™ products

—

To whom it may concern,

The purpose of this communication is to announce and inform our customers about the *end-of-active-life* for the NanoMag™ crawler and its associated controller. This product has been in the field for numerous years and has proven to be reliable and trusted by companies worldwide. However, due to increasing problems in sourcing replacement parts for repairs and occasional maintenance, the product is entering the *end-of-active-life* phase of their product life cycle.

Eddyfi Robotics is introducing the VersaTrax M145 as a replacement product. The VT-M145 is a more capable replacement for the Nanomag that leverages the architecture and features offered throughout our VersaTrax product platform. The controller for the VT-M145 can either be the IC100 or the IC500 and uses ICON software to control and operate the crawler.

Maintenance and service will be supported on a best-effort basis for units delivered to our Nanaimo office before the *end of life* mentioned below. Beyond the *end-of-life* date products will no longer be supported, maintenance and repairs will no longer be available as a standard offering.

We hope this information helps you plan and initiate any further actions required for your equipment. Please feel free to contact your local sales representative or sales@eddyfi.com for questions you may have; or to learn more about new systems and how they can be integrated in your facilities.

Regards,

Craig Senych  
General Manager, Eddyfi Robotics

Product	End of Life Date	Replacement
Nanomag™	April 30 <sup>th</sup> , 2025	VersaTrax M145
Nanomag Analog Controller	April 30 <sup>th</sup> , 2025	IC100 or IC500 with ICON Software
